

Figure 1

Figure 1 consists of two panels, (a) and (b), each showing a series of horizontal bars representing different categories or groups.

Panel (a) shows a single set of bars across several categories, likely representing a baseline or control group.

Panel (b) shows multiple sets of bars, possibly representing different experimental conditions or treatments applied to various groups.

The x-axis labels are partially obscured by heavy black redaction marks, making them illegible. The y-axis also has some redacted labels, though numerical values might be present.

The overall figure appears to be a bar chart used for comparative analysis between different groups or conditions.
